DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-6, drawn to a process for production of glycolipids, classified in class 436, subclass 71.
- II. Claim 13, drawn to a composition comprising tetraglucosyldiacylglycerol, classified in class 536, subclass unknown.
- III. Claim 14, drawn to a composition comprising glycosylphosphatidylglycerol, classified in class 536, subclass unknown.
- IV. Claim 15, drawn to a composition comprising diglucosylphosphatidylglycerol, classified in class 536, subclass unknown.
- V. Claim 16, drawn to a method of maintaining food composition, classified in class 426, subclass 73.
- VI. Claim 17, drawn to a method of cleaning, classified in class 435, subclass 264.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II, III, IV are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the chemical compounds can be made by chemical synthesis as opposed to the use of biological method of group I.

Inventions II, III, IV and V, VI are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the process of maintaining the food and cleaning can be practiced by other methods as opposed to the use of products of groups II-IV.

Art Unit: 1652

Inventions V and VI are patentably distinct from each other. The methods of group V and VI are all unrelated as they comprise distinct steps, utilize different products and produce different results. The groups have acquired separate status in the art and separate fields of search as further evidenced by their separate classification.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

A telephone call was made to Anne-Marie Kaiser on 10-17-01 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
